

## The principles of hospital designs Prof. Ahmed Atteyya

A lecture organized by Dr. Ahlam Sharif from Philadelphia University tackled the hospital designs and healthcare facilities. Titled "The principles of hospital designs," the lecture was given by prof. Ahmed Atteyya who had his PhD from Alexandria University in 1980 and currently works at Jordan University of Science and Technology.

The lecture which was conducted in October 2018 at the main theatre of Philadelphia University covered a general background about hospital designs, the main standards and case studies to analyze the main principles of hospital designs. The common lecture was mainly directed to fourth year students as well as graduation students who have similar studies. The students were encouraged to participate and ask questions about their designs.

The lecture allowed students to have more analytical view on healthcare facilities, which put high demands on the design quality of care environments that are person centered, welcoming, and accessible while also supporting privacy and security. The lecture also introduced students on the decisions about the healthcare design based on credible research and the evaluation of existing building projects.
