IX. Learning and Teaching Committees

X. Students Feedback and Representation
1. Staff Students Consultative Committee
2. Departmental and Deanship Meetings
3. Course Evaluation Questionnaires

XI. Communications
1. Official Notices
2. Electronic Mail
3. Obscene or Offensive Mail
4. Group Mailing
II. Mission Statement

The mission of The Management Information Systems Department is derived from the overall IT Faculty and University mission. The Management Information Systems Department at Philadelphia University was established during the year 2000-2001. The basic objective of the department is to generate highly skilled professionals to meet the growing market demands in the Information Technology and Systems.

The mission of the Management Information Systems Department at Philadelphia University is to provide outstanding education to its undergraduate students in accordance with the principles of the University mission, to advance scholarship in key domains of Management Information Systems, and to engage in activities that improve the welfare of society. The Department aims to maintain an environment that promotes innovative
thinking; values mutual respect and diversity; encourages and supports scholarship; instills ethical behavior; and engenders life-long learning.

The curriculum of this program aims to prepare students to have a good understanding of Information Technology and its use in organizations for information system development, decision making, project management, etc, and to develop Management Information Systems with Management/Business environment. The graduates from this department can apply IT knowledge in design, development, and implementation.

III. Important Dates

1. Registration:
Admission criteria are issued by the Higher Education Council, which governs all private universities (55% in the Tawjihi exam). First year students must attend the University and they will be given a full timetable for the introductory activities. Departmental and University registration must be completed at the time specified in the introductory timetable (shown below). Returning students must also register in the times specified during introductory week.

(a) The morning study (full-time students)
First year students must attend at 8.00 AM on Sunday 11th October 2009.

(b) The evening study (part-time students)
First year students must attend at 4.00 PM on Sunday 11th October 2009.

2. Session Dates 2009-2010

A. FIRST TERM
• The morning study
  Ends: Tuesday 2nd February 2010

  The first semester includes
  - Teaching, learning, and assessment activities in MIS will run for 16 weeks, from Sunday 11th October 2009 to Tuesday February 2nd 2010.

• The evening study
  Ends: Tuesday 2nd February 2010.

  The first semester includes

B. SECOND TERM
• The morning and evening studies
  Begin: Monday 2nd February 2010
  End: Tuesday 8th June 2010

  The second semester includes
  - Teaching, learning, and assessment activities in MIS will run for 16 weeks, from Monday 2nd February 2010 to Tuesday 8th June 2010.

C. SUMMER TERM
• The morning and evening studies
  Begin: Sunday 27\textsuperscript{th} June 2010
  End: Thursday 19\textsuperscript{th} August 2010

Summer semester includes teaching, learning, and assessment activities, which will run from Sunday 27\textsuperscript{th} June 2010 to Thursday 19\textsuperscript{th} August 2010.

• Examination Periods

  \textbf{First Semester:}
  (for morning study) – Wednesday 18\textsuperscript{th} November to Thursday 26\textsuperscript{th} November 2009. (First Exam)
  (for evening study) - Wednesday 18\textsuperscript{th} November to Thursday 26\textsuperscript{th} November 2009. (First Exam)
  (for morning study) – Wednesday 23\textsuperscript{rd} December to Thursday 31\textsuperscript{st} December 2009. (Second Exam)
  (for evening study) - Wednesday 23\textsuperscript{rd} December to Thursday 31\textsuperscript{st} December 2009. (Second Exam)
  (for morning study) – Sunday 24\textsuperscript{th} January to Tuesday 2\textsuperscript{nd} February 2010. (Final Exam)
  (for evening study) - Sunday 24\textsuperscript{th} January to Tuesday 2\textsuperscript{nd} February 2010. (Final Exam)

  \textbf{Second Semester:}
  (for morning study) – Wednesday 24\textsuperscript{th} Mar to Thursday 1\textsuperscript{st} April 2010. (First Exam)
  (for evening study) - Wednesday 24\textsuperscript{th} Mar to Thursday 1\textsuperscript{st} April 2010. (First Exam)
  (for morning study) – Wednesday 28\textsuperscript{th} April to Thursday 6\textsuperscript{th} May 2010. (Second Exam)
  (for evening study) - Wednesday 28\textsuperscript{th} April to Thursday 6\textsuperscript{th} May 2010. (Second Exam)
  (for morning study) – Sunday 30\textsuperscript{th} May to Tuesday 8\textsuperscript{th} June 2010. (Final Exam)
  (for evening study) - Sunday 30\textsuperscript{th} May to Tuesday 8\textsuperscript{th} June 2010. (Final Exam)

  \textbf{Summer Semester:}
  (for morning study) – Sunday 18\textsuperscript{th} July to Thursday 22\textsuperscript{nd} July 2010. (First Exam)
  (for evening study) – Sunday 18\textsuperscript{th} July to Thursday 22\textsuperscript{nd} July 2010. (First Exam)
  (for morning study) – Sunday 1\textsuperscript{st} August to Thursday 5\textsuperscript{th} August 2010. (Second Exam)
  (for evening study) - Sunday 1\textsuperscript{st} August to Thursday 5\textsuperscript{th} August 2010. (Second Exam)
  (for morning study) – Sunday 15\textsuperscript{th} August to Thursday 19\textsuperscript{th} August 2010. (Final Exam)
  (for evening study) - Sunday 15\textsuperscript{th} August to Thursday 19\textsuperscript{th} August 2010. (Final Exam)

3. Timetable
Lectures timetable is published separately from this book. Whilst every attempt is made to timetable reasonable combinations of course units (modules), various constraints make some combinations and outside options impossible. If you have a timetable problem, please consult your personal tutor in the first instance.

IV. Scope and Input Resources

1. Aims and Objectives
   \textbf{Aims:} The Bachelor of MIS aims to produce graduates who will be able to:
   \begin{itemize}
   \item Develop Management Information System with Management/Business environment.
   \item Have a good understanding of Information Technology and its use in organizations for information system development, decision making, project management, etc.
   \item Have a life long learning attitude.
   \item Apply IT knowledge in planning, design, evaluation, development, implementation, etc.
   \end{itemize}

   \textbf{Objectives (Learning Outcomes).} Learning outcomes describe what you should know and be able to do if you make full use of the opportunities for learning that we provide. All these skills are described in the following areas (A, B, C, D). In the individual module syllabi, the categories of learning outcomes (A, B, C, D) and the individual learning outcomes appropriate to the module are identified.
A- Knowledge and Understanding of
A1) The essential mathematics relevant to Management Information Systems;
A2) A wide range of principles and tools available to MIS Professionals including CASE tools, programming language, case studies, etc;
A3) The principles of computer systems, including architecture, networks communication;
A4) The professional and ethical responsibilities and understanding of quality;
A5) The principles and techniques of a number of research areas such as databases, decision support systems, information management, project management, etc;
A6) The application of computing in management and business context;

B- Intellectual (thinking) skills - able to
B1) Solve a wide range of problems related to the analysis, design and implementation of Management Information Systems;
B2) Contribute in design and implement software systems in the field of decision making and strategic planning;
B3) Identify a range of solutions and critically evaluate and justify proposed design solutions in different MIS fields including decision making, business systems, planning, project management, etc;

C- Practical skills - able to
C1) Plan and undertake a major individual project.
C2) Prepare and deliver coherent and structured verbal and written technical reports.
C3) Give technical presentations suitable for the time, place and audience.
C4) Use the scientific literature effectively and make discriminating use of Web resources.
C5) Design, write and debug computer programs in appropriate languages.
C6) Use appropriate computer-based design support tools.

D- Transferable skills - able to
D1) Display an integrated approach to the deployment of communication skills.
D2) Use IT skills and display mature computer literacy.
D3) Work effectively with and for others.
D4) Strike the balance between self-reliance and seeking help when necessary in new situations.
D5) Display personal responsibility by working to multiple deadlines in complex activities.
D6) Employ discrete and continuous mathematical skills appropriately.

In order to provide students with the “life long learning” attitude, the teaching method is essentially based on self learning (3 hours in class rooms and 6 hours out of class rooms: coursework, practical works, workshops, seminars, etc.)

2. Staff
A. Academic Staff
   • Qualifications
     The academic staff members are divided into two categories: full-time and part-time. The number of full-time staff members is 7, while the number of part-time staff depends upon the number of students and the needs of the Department. The academic staff members, who are between 25 and 53 years of age, have relatively adequate experience ranging from 1 year to 25 years.
     Six academic staff members at the Basic Sciences Department / Faculty of Science assist in teaching the Mathematics and Discrete Structures course units.

   • Specialisations
     Full-time as well as part-time teaching staff members have various specialisations that can be divided into four categories (Software, Communication and Interaction, Practice, Theory). At present, there are six research teams at the Faculty of IT and young staff members belong to these teams.

B. Non-Academic Staff
Besides the academic staff, the Department has 4 other full time members, 2 of them hold a B.Sc. degree in Computer Science and 2 holds a B.Sc. in Computer Engineering. Those staff members have 3 to 7 years working experience and some of them have been appointed from Philadelphia University graduates who hold bachelor degrees with Grade “Excellent” or “Very Good”.
All of the non-academic staff members are qualified as laboratory tutors and assist lecturers in the laboratory hours. In addition, some of them are responsible for maintenance of computer hardware and software in the laboratories.

3. Departmental Learning Resources

- **Code of Practice for Student Computer Usage**
  At registration, you will be required to assent to the following departmental code of behavior, which relates to the responsible use of Computer equipment. Misuse of the facilities is regarded as serious disciplinary offences.
  This code of practice is supplementary to University regulations concerning the use of computing equipment to which you are required to assent at Registration.
  1. Every student is allocated one PC in every laboratory session. But for UNIX laboratory, you have been allocated one or more usernames for your own personal use: you must not use other usernames or permit other people to use your username. You must not use computers to which you have not been granted access, or attempt to access information to which you have not been granted access.
  2. You must not deliberately hinder or annoy other computer users.
  3. You must not use machines belonging to the Department for commercial purposes without the prior written permission of the Head of Department. You must not sell the results of any work you do using Departmental facilities without the prior written permission of the Head of Department.
  4. You must not write or knowingly store, on machines belonging to the Department, software that, if executed, could hinder or annoy other users, except with the prior written permission of the Head of Department.
  5. You must not make an unauthorized copy, in any form, of copyright software or data.
  6. You must not store personal information, except in a manner permitted by the Data Protection.
  7. You must follow all rules, regulations and guidelines imposed by the Faculty of IT and the University in addition to the Department's Code of Practice.

- **Explanatory Notes**
  The following notes indicate ways in which the Code of Practice applies to undergraduates for use of computers. It is not intended to be a complete list of possible abuses of the equipment. Each note refers to the corresponding paragraph above.
  1. Undergraduate students are not normally granted access to the computers in the network, or to other students' files. You should not attempt to use another student's account even if they have not set a password. Of course, it is still important to set a password for your own privacy and security.
  2. This will be interpreted very broadly. It includes
     - Tampering with another user's files.
     - Tampering with another user's screen.
     - Setting up processes which persist after you log out and annoy subsequent users of the machine.
     - Broadcasting of offensive messages.
     - Display or storage of offensive pictures.
     - Abuse of the mail system.
     - Occupying a machine to play games while other students need it to do their laboratory work.
  3. Clearly, the Head of Department would have to be convinced that any such use of the machines would not conflict with their primary purpose.
  4. Note carefully that this means you are not allowed to write or introduce a virus program, even if it is never executed.
  5. Note that this does not prevent your taking copies of your laboratory work home, or making copies of non-copyright material, but does prevent your taking random pieces of software away on a floppy. You should assume that all material is copyright unless it specifically states otherwise. If in doubt, ask.
6. Personal information includes names, addresses, mailing lists, etc. You should contact the Data Protection Officer, Mr. Tarek Hassan, if you need to store such information.

7. In fact, you agreed to abide by the University and Faculty rules when you registered. Please direct queries concerning the code of practice to the Department Chair.

- **Support for Computer Equipment**
  Students are encouraged to own their own machines. Please note, however, that you are NOT REQUIRED to own your own computer. The Department has excellent facilities and undergraduate students are allowed to use the facilities provided in the buildings of the Faculty of Information Technology and the Faculty of Science. Whenever the buildings are open between 08 AM and 07 PM, access is also allowed in this range of time, from Sunday to Thursday during term.

- **Learning Resource Center**
  Photocopy facilities are available in the Learning Resource Center, room 103, Extension 453. Reference copies of textbooks are available for consultation. Copies of previous weeks' tutorial solutions are also available. The resource center holds non-loan copies of undergraduate textbooks. Lending copies of textbooks are available in the University Library.

- **Photocopying**
  Out of the library, photocopy may be done at different Bookshops, on an affordable cost.

- **Printing**
  You can take printout (free of charge) in any lab of the Department. Each lab contains at least two printers for this purpose.

- **Departmental Computer Club**
  This is organized and run by students. It arranges various activities from time to time. See the notice boards in the Faculty.

- **Administrative Infrastructure**
  It is composed of seven offices (Dean, 2 Advisory services, Dean Secretary, and Department's Chair, Department Secretary, and Meeting Room).

- **Academic Infrastructure**
  It is composed of
  - 14 Department classrooms plus some other classrooms shared with other faculties and one lecture theatre equipped with support facilities: computer, data show, overhead projector.
  - 23 laboratories (each contains 20 to 25 PCs or Monitors and 1 to 2 printers): Windows NT Laboratories, Internet Laboratories, SunRay1 UNIX Laboratories, and Sun Sparc UNIX Laboratory.
  - 1 Learning Resource Center that contains computers, textbooks and related reference books and journals.
  - 7 staff offices where each staff member is supplied with a PC.
  - 1 room for staff meeting
  - 1 office for the student’s guidance and examination committee.

- **Lecture Support Facilities**
  In the Department, there are 4 overhead projectors and 7 data shows used to support modules and seminars presentations.

- **University Computer Centre**
  This centre provides the Department with training and maintenance facilities.

- **Networking Facilities**
  - **Ethernet:** The PCs in each laboratory are connected to an Ethernet platform 10/100 Mbps.
  - **Intranet:** All computing facilities of the University are connected to a Gigabit Intranet backbone.
  - **Internet:** The University is connected to the Internet by 2 Mbps lines.
• **Type and Level of Access**
  For communication, computing, or information searching, the Department provides free access to networking facilities at any time for the staff and the students.

• **Library Infrastructure**
  This structure includes the University Main Library, which it provides students and staff members with the required recent text and references books, journals, and CD ROMs. According to its collaboration and co-ordination program, it has relations with more than 120 universities and scientific organisations. It opens from 08 AM to 07 PM. It includes:
  - **Conventional Library**, which contains books and journals. The books room contains more than 1860 different English titles in computing, where more than 40% are edited in years 2000 and later. The room of journals contains 30 computing journals that are useful for research and teaching.
  - **Electronic Library**, which contains CD ROMs for the taught programming languages and module support tools. It is connected to approximately 800 universities electronic libraries via the World University Library that is endorsed by the United Nation University. The World University Library has four databases that contain more than 3300 periodicals available online. The online resources in the electronic library include sites that list more than 40000 online books and access to online libraries and encyclopaedias and other databases on the Internet.
  - **Internet Access Service**, available in a room containing 10 PCs.

• **Bookshops**: contain books, exercises with solutions, solutions to previous examinations and so on.

• **Extracurricular Activities**
  The University provides some entertainment for the students to enrich their talents in their free time. This includes:
  - **A Deanship of Student Affairs** that organises the social, cultural, and sport activities for the students in the University. It has also an alumnae office that keeps track of the graduate's information and news.
  - Several spaces for different sports.
  - Several spaces for cultural activities.
  - Several common rooms for meetings, snacks, and cafeterias.
  - Three Internet cafes each one containing 11 PCs.
  - One Students Club.

### V. Student Support and Guidance

1. **Vice Dean Office**
   The **Vice Dean Office** is mainly for students advisory services. It deals also with all routine undergraduate enquiries. Problems, which cannot be dealt with by the Assistant Dean, will be referred to an appropriate person in the Department or University.

2. **Academic Guidance**
   All new students should have academic (personal) tutors. The new students are grouped into 20 – 30 students groups and each group is assigned to an academic staff member who is their academic tutor. The students remain with the same tutor till their graduation. The tutor deals with all routine undergraduate inquiries, advises for academic registration at the beginning of each semester, and any other raised problems. However, problems, which cannot be dealt with by the tutor, will be referred to the head of the Department, the Dean of the Faculty, or to an appropriate member of academic staff. The academic guidance is available on specified dates in the terms, and any advisory service offered by the Assistant Dean is available daily to all students in the Mangement Information Systems Department (including both Full- and Part-time students).
   Time: 08:00 AM to 04:00 PM Sunday to Thursday during term.
   Time: 11:00 AM to 07:00 PM Sunday to Thursday during term.
The advisory service offers advice on departmental and University matters and helps with anything that concerns you, whether in your studies, in the Department, in the University or in your life outside the university. Each of the staff in these offices is available with knowledge of the Department and University and who is willing to listen and help with whatever you bring. Note that

- All visits to the advisory service offices are strictly confidential.
- If you have difficulties with material on particular course units you should normally first approach your tutors (or lecturers/project supervisors). You may also consult your tutors on matters that are more general but you can equally well call in at the Assistant Dean Offices.
- If you have health problems, you are welcome to consult an advisor in the Department but may prefer to go directly to your doctor or to the University Clinic.

Feel free to make use of these services at any time on any matter.

3. Students Affair Deanship

Confidential, individual counseling on any matter affecting personal well-being or effectiveness is available at the Philadelphia University Students Affair Deanship. The Deanship sees well over a hundred students a year and gives expert advice on problems such as low motivation, personal decision making, relationships, and anxiety and family difficulties. People there, are willing to help in finding fresh ways of coping with the emotional and personal aspects of problems and seeks to do so in a collaborative, straightforward and empowering way with the individual concerned. Advice is available concerning referral to other services, helping others and dealing with common student problems such as exam anxiety.

The Deanship is open from 8.00 AM to 4.00 PM, from Sunday to Thursday throughout the year and appointments can be made by calling into the office of the Dean of Students affairs. All inquiries will be treated confidentially.

4. Tutoring Arrangements

Some of your course units will have tutorials, where you can discuss topics on a course unit and run through exercises. Usually, the lecturer of the course unit runs the tutorial. There will be an opportunity for you to ask questions on matters you do not understand.

As you have a personal tutor from the beginning of your University life, your tutor is here to help you in your way through University life. He/she will watch your progress and offer help and advice wherever necessary. If you get into difficulties, you should contact your personal tutor or visit the Assistant Dean at the earliest possible opportunity. Do not let things slide until it is difficult to retrieve the situation, especially if you are getting behind with your work. Your personal tutor will also advise on your choice of course units, on departmental or University procedures and will provide references for jobs and other purposes.

Course lecturers are always available to discuss questions or problems with the course unit material. Each lecturer fixes at least six office hours on his timetable, which is fixed on his office door. You can call at these hours. For any reason, if these lecturers could not see you at these office hours, they may arrange an appointment at another time. It is important that any matter that affects your ability to work is notified to the Department - through your personal tutor, through the Assistant Dean or otherwise. The following are examples of matters that may affect your work: illness, personal or family difficulties (including illness in the family) or financial problems. In assessing your performance, the Department has a policy of trying to compensate for difficulties you have encountered whilst studying. We can only do this if we are notified of difficulties and have some idea of their extent.

5. Student Progress

Work and Attendance. The University regulations governing the Work and Attendance of students are given in the Student Guide 2008/2009. Full attendance is required at all lectures, laboratories, and any tutorials, which may be scheduled. Completed laboratory work should be handed in on time. Attendance at laboratories and at many lectures is monitored and attendance registers kept. Please note that the expectation is that students will be required to undertake approximately thirty six hours per week of study i.e. an average of two hours private study will be required for every scheduled hour of lectures, laboratories etc. and some students may require much more time than this. Being a student is a full time occupation! Absence for holidays is not permitted in term-time. The experience of the Department confirms that lack of attendance leads to study problems and any student with problems should consult his/her subject tutors or personal tutor. In addition, failure to attend can result ultimately in refusal by the University to allow a student to sit in the degree...
examinations. The duty of the lecturer is to keep continuous review of the work and attendance of the students with whom he is concerned. If the rate of student absences, in a course unit, is greater than 15% (or 20% for student representing the University in sportive or cultural activities) of the completely accredited hours and the student has no acceptable justification, then this student is excluded from that course unit. If the Dean of the faculty accepts the justifications of absence, then this student is mentioned as withdrawn without refunding the registration fees. A formal process is defined to tackle the problem of any student whose work and attendance appear unsatisfactory. Direct approaches by lecturer to solve the problem are as follows: He may choose to issue an "informal" warning, which has a precisely defined format and permits recovery of the situation. If this is unsatisfactory, a "formal" warning is issued. This is again of a precisely defined format. Failure to recover the situation at this stage leads to an exclusion from the course. A copy of this correspondence is held in a student's file.

6. Interruption of Degree Program
Any interruption (taking at most 2 years) of your degree program requires special permission from Faculty. Regulations state that a B.Sc. degree is a continuous 4-year period of study. Permission will only be granted if satisfactory reasons are given. A written case with supporting evidence must be presented to Faculty. Reasons might include prolonged illness. Consult your tutor for advice.

7. Transfer between Departments
- If you are contemplating any change of Faculty or Department, consult your primary tutor as soon as possible.
- You can change your Department by filling a special form at the beginning of the semester. It is only required that the Tawjihi average imposed in the new faculty or department must be less than or equal to your Tawjihi average. A specialized committee will decide what courses will be retained from your actual Department.

8. Withdrawal from Modules
If you are contemplating withdrawing from a module, please discuss the situation with your personal tutor at the earliest opportunity.
- You can withdraw a module at most during the thirteenth week of the first or second term, and at most during the seventh week of the summer term.
- The minimal number of modules (which is 9) required in each term should be followed.

VI. Organization of Teaching
An individual course of lectures is known as a "course unit" or sometimes as a "module". The curriculum contains modules that are from University Requirements (Univ. Reqts.), Faculty Requirements (Fac. Reqts.), and Department Requirements (Dept. Reqts.). Each module has 3 credit hours per week. However, some modules are supported by tutorials and some continuous assessment, such as seminars or laboratory work, usually amounting to 1 hour per week. When you register for course units, you should follow the academic guidance plan that the Department arranges for you. In fact, you can register on any module only if you have taken its prerequisite(s) with the exception that you can register on the module and its prerequisite only if you are in the graduation semester.

In each semester, you can register for at least 12 credit hours and at most 18 credit hours, except for the semester in which you are expected to graduate when you can register for 21 hours. The complete four years academic guidance plan is listed in Appendix A of this Handbook. For more information about module numbering and outline module descriptions, see Appendix B of this Handbook.

In the First Year, you are encouraged to take 18 credit hours in each semester (first and second, the summer term is not taken into account). The fourth digit of each course unit code (see Appendix B) tells you the year in which the course is offered. During each 16 weeks semester, students will normally attend 6 modules. Thus, each teaching week contains 18 hours or more of scheduled work. In addition, each scheduled hour typically requires two extra hours of unscheduled work (e.g. writing up lecture notes, preparing for a tutorial, finishing off a laboratory exercise etc.). The selection of a University elective module (one module) depends upon your choice.
Five of the 12 modules of the first year are from the University requirements, three from the Faculty requirements, two from the support requirements, and two from the Department requirements.

In the Second Year, the number and size of modules is similar to that of the first year. One of the 12 modules of the second year are from the University requirements, two from the Faculty requirements, one from the support requirements, and eight from the Department requirements.

Meanwhile, in the Third Year, you should take six modules in the first semester and five modules in the second semester. Nine modules are from the compulsory Department Requirements, one module from the University requirements and one module form the Faculty requirements. One of the compulsory modules is the Practical Training module, which consists of realizing a supervised training in an industrial organization, or using distance online training. You should take this module in the first semester.

In the Fourth Year, you should take nine modules in this year. In the first semester, you must select one departmental elective module, three compulsory modules that are all from the Department requirements, and one module from the Faculty requirements. In the second semester, you must take the Graduation Project module, one departmental elective module, one University elective module, and one free module from any department in the University.

VII. Course Unit Choices

You may choose a course unit (module) if you have already taken all its prerequisite modules and your personal tutor must supervise this choice.

An initial choice is made before or at Departmental Registration. After that, changes can be made as follows:

- The deadline for changing modules in each semester is one week after lectures start (three days for summer semester). Normally, no changes of modules will be permitted after these dates except for the withdrawal mentioned in point (8) of the previous section.

- In the first instance, you should discuss any plan to change modules with your primary tutor. You must check that the new module you wish to take is a valid option for your degree program and find out if there are likely to be any timetable problems. If there are timetable clashes this will probably prevent you from changing module.

VIII. Assessment and Examinations

1. Criteria for Assessing Examination Work

   **First class (90 – 100 marks).** First class answers demonstrate depth of knowledge or problem solving skills, which is beyond that expected from a careful and conscientious understanding of the lecture material. Answers will show that the student
   1. has a comprehensive knowledge of a topic (often beyond that covered directly in the program) with an absence of misunderstandings;
   2. is able to apply critical analysis and evaluation;
   3. can solve unfamiliar problems not drawn directly from lecture material and can adjust problem solving procedures as appropriate to the problem;
   4. can set out reasoning and explanation in a logical, incisive and literate style.

   **Upper Second class (80 – 89 marks).** Upper second class answers provide a clear impression of competence and show that the student
   1. has a good knowledge base and understanding of all the principal subject matter in the program;
   2. can solve familiar problems with ease and can make progress towards the solution of unfamiliar problems;
   3. can set out reasoning and explanation in a clear and coherent manner.
Lower Second class (70 – 79 marks). Lower second class answers will address a reasonable part of the question with reasonable competence but may be partially incomplete or incorrect. The answer will provide evidence that the student:

- has a satisfactory knowledge and understanding of the principal subject matter of the program but limited to lecture material and with some errors and omissions;
- can solve familiar problems through application of standard procedures;
- can set out reasoning and explanation which, whilst lacking in directness and clarity of presentation can nevertheless be followed and readily understood.

Third Class (60 – 69 marks). Third class answers will demonstrate some relevant knowledge but may fail to answer the question directly and/or contain significant omissions or incorrect material. Nevertheless, the answer will provide evidence that the student

- has some basic knowledge and a limited understanding of the key aspects of the lecture material;
- can attempt to solve familiar problems albeit inefficiently and with limited success.

Pass (50 – 59 marks). Answers in this category represent the very minimum acceptable standard. Such answers will contain very little appropriate material, major omissions and will be poorly presented lacking in any coherent argument or understanding. However the answer will suggest that the student

- has some familiarity with the general subject area;
- whilst unable to solve problems can at least formulate a problem from information given in a sensible manner.

2. Assessment Regulations

In general, every module is assessed as follows: 50% is given for two 1-hour midterm exams, coursework and/or seminars, projects, or essays, and 50% for the final exam that may be a written exam only or a written exam plus final laboratory exam (if applicable), final small project, or seminar presentation. The 50% of the final exam is from the University regulations. The minimum pass mark is 50% for any module, whereas the minimum passing accumulated average in each semester is 60%. Students will be warned if they could not obtain average of at least 60%. In this case, students are encouraged to repeat studying those modules with low marks in order to increase their accumulated averages. However, students will be dismissed from the University if this average is not achieved in the third attempt.

For the practical training module, each student should submit a technical report of his/her training, and a team of academic staff members makes several observations on the trainers’ work in their place of training. Then according to the observations and the report, they assess the students.

On the other hand, a committee of three staff members, including the supervisor of the project, assesses the graduation project module. The project's assessment includes the supervisor mark (35%) and the discussion committee mark (65% given as follows: 20% for project presentation, 25% for report writing, and 20% for defendant discussion).

3. Role of Internal and External Examiners

For each module, the Department assigns a module coordinator and an internal examiner who is one of the senior staff members. If many lecturers teach the same module concurrently, they should suggest exam questions (for the first, second and final exams) and run the same exam for all sections. The main coordinator of the module will collect these questions from lecturers and select some of them to be in the exam paper.

On the other hand, external examiners validate the standard of degree program. The external examiners are expected to look at the question papers, inspect a selection of scripts and project reports (particularly those on borderlines). They supply an assessment report to the Department.

4. Appeal Procedures

If you have good reason to question a mark you have been given (in midterm exams or in coursework), you should in the first instance approach the module lecturer. If the problem is not solved, you must submit it to your primary tutor. He will find the appropriate solution with administrative structures.

Problems with final examinations are resolved by submitting complaints or appeals in writing (within three days of the announcement of examination results) to the Examination Committee of the Faculty. The examination committee will consider these cases and checks if there is any mistake in the summation of the marks and so on.
5. Unfair Practices
The University treats attempting to cheat in examinations severely. The penalty is usually more severe than a zero in the paper concerned. More than one student of this Department were dismissed from the University because of this. Plagiarism, or copying of course or lab work, is also a serious academic offense as explained in the University guidelines. In Management Information Systems Department these guidelines apply also to laboratory exercises.

6. Department Guidelines on Plagiarism
1. Coursework, laboratory exercises reports and essays submitted for assessment must be your own work, unless in the case of group projects a joint effort is expected and is indicated as such.
2. Unacknowledged direct copying from the work of another person, or the close paraphrasing of somebody else's work, is called plagiarism and is a serious offence, equated with cheating in examinations. This applies to copying both from other students' work and from published sources such as books, reports or journal articles.
3. Use of quotations or data from the work of others is entirely acceptable, and is often very valuable provided that the source of the quotation or data is given. Failure to provide a source or put quotation marks around material that is taken from elsewhere gives the appearance that the comments are ostensibly your own. When quoting word-for-word from the work of another person quotation marks or indenting (setting the quotation in from the margin) must be used and the source of the quoted material must be acknowledged.
4. Paraphrasing, when the original statement is still identifiable and has no acknowledgement, is plagiarism. A close paraphrase of another person's work must have an acknowledgement to the source. It is not acceptable for you to put together unacknowledged passages from the same or from different sources linking these together with a few words or sentences of your own and changing a few words from the original text: this is regarded as over-dependence on other sources, which is a form of plagiarism.
5. Direct quotations from an earlier piece of your own work, if not attributed, suggest that your work is original, when in fact it is not. The direct copying of one's own writings qualifies as plagiarism if the fact that the work has been or is to be presented elsewhere is not acknowledged.
6. Sources of quotations used should be listed in full in a bibliography at the end of your piece of work.
7. Plagiarism is a serious offence and will always result in imposition of a penalty. In deciding upon the penalty the Department will take into account factors such as the year of study, the extent and proportion of the work that has been plagiarized and the apparent intent of the student. The penalties that can be imposed range from a minimum of a zero mark for the work (without allowing resubmission) through caution to disciplinary measures (such as suspension or expulsion).

IX. Teaching Quality Assurance Committee
The Departmental Teaching Quality Assurance and Enhancement Committee is responsible for the quality of teaching in the Department, including the analysis of Course Evaluation Questionnaire responses.

X. Student Feedback and Representation

1. Staff Student Consultative Committees
Student representatives are elected onto the departmental staff student committees at the start of each term. All simultaneous sections of a module have a staff student committee. Each committee meets at least three times each semester and may discuss any matter of concern with the module. The staff members of each committee are the lecturers of the concerned sections.

2. Departmental and Deanship Meetings
The meetings, held by the head of Department and the Dean of the Faculty during term time, has mainly an advisory role, where students may raise their problems that need some concern from these authorized persons. These meetings are held separately for each year students.
3. Module Evaluation Questionnaires
The Department attaches great importance to the opinion of students on the quality of the teaching provided, and every student is asked to complete a Module Evaluation Questionnaire for each module. The questionnaires are anonymous.

XI. Communications

1. Official Notices
Official notices are posted on the notice boards at the Department and at the Faculty. Electronic mail is also used extensively for communication with the Department and University. Each lecturer provides the students with his/her e-mail at the beginning of the term. Most official information including copies of this handbook, the undergraduate syllabus and timetables are available on the University Web pages www.philadelphia.edu.jo. This includes directories of staff and students for internal use, completed with photographs.

2. Electronic Mail
Electronic mail is used widely for administrative purposes within the Department. It is frequently useful for communicating between individuals and small groups (e.g. between a tutor and his/her tutorial group), and occasionally for broadcasting important messages to wider groups. It is important that you know how to use email. It will be covered in the introductory laboratory sessions. The code of practice for computer usage covers electronic mail, please note the points below.

3. Obscene or Offensive Mail
DO NOT SEND OBSCENE OR OFFENSIVE MAIL. If you receive mail, which you regard as offensive or obscene, you may wish to complain to a member of staff so that appropriate disciplinary action can be taken against the offender.

4. Group Mailing
You are strongly discouraged from sending email to groups of people. The newsgroups should be used for this purpose.

5. Miscellaneous Hints
• Be brief in your communications.
• Compose your message as if ALL of your recipients were physically present.
• Limit the distribution of messages to the people who are likely to be interested.
• Keep a copy of the mail you send out, for future reference. Learn to use folders to keep useful messages.
• Read all your incoming mail before replying to any of it. There may be other relevant messages for you to read.
• Be careful when replying to messages. You probably want your reply to go only to original message sender not to the whole of the distribution list.
• When you reply to a message, it is frequently helpful to include some of the original message to help your recipients to remember and understand the context of the reply.

XII. Curriculum Design, Content and Organization

1. Curriculum Design and Content
Students should complete 44 modules (132 credit hours) summarised as follows:

- 9 modules (University requirements) (27 credit hours) (20.45 %)
- 8 modules (Faculty requirements) (24 credit hours) (18.18%)
- 20 modules (Departmental Compulsories) (60 credit hours) (45.45%)
- 2 modules (Departmental Electives) (6 credit hours) (4.55 %)
- 5 modules (Supportive modules) (15 credit hours) (11.36 %)

The Department covers the Management Information Systems program from the areas listed below:
1. Programming fundamentals
2. Quantitative analysis
3. Databases and data mining
4. Networks and Operating Systems
5. Information Systems and intelligent systems
6. Management Information Technology and systems
7. Human Computer Interaction and applications
8. Professional practice
9. Project and training

Table (1) gives the number of covered modules in each area. Note that the ratios are calculated according to 44, which is the total number of modules that each student should study. In this Table, the total number of the compulsory modules is shown as 33 rather than 24. This is because some modules from University and Faculty requirements are included as they are strongly related to the compulsory modules. Table (2) illustrates the taught modules in each area.

### Table (1) Areas of Specialization and Number of Modules

2. Curriculum Organization. The curriculum is organised as it is shown in the study plan in Appendix C.

3. Curriculum Characteristics
   - **Objectives of the Main University-Requirement Modules.** These requirements are to broaden the student's base for different topics such as culture, languages, and computer skills for scientific college.

   - **Objectives of the Main Faculty-Requirement Modules.** These requirements are to consolidate mainly the student's background in Mathematics and some other common topics. They constitute the common knowledge required for all students in the Faculty of Information Technology.

   - **Objectives of the Main Computing Modules in the Curriculum.** The modules in the curriculum are organized into three types: introductory, intermediate, and advanced modules. The curriculum is designed according to the Imperative First Strategy for the introductory modules. This model also focuses on programming, but emphasises the principles of object-oriented programming and Design from the second semester of the first year. The curriculum of Intermediate modules is designed according to the Topics-based approach, which is the most common approach for the intermediate modules. Students take
separate modules in each of the core areas enumerated below (programming fundamentals with object-oriented paradigm, Management Information Systems, Multimedia, Professional Practices, etc.). For the advanced modules, the Department wishes to orient such modules to its own areas of expertise. The advanced and elective modules contain more advanced topics in the areas of Management Information Systems, Real Time Systems, and Project and Training. Recent methodology in programming such as object-oriented programming, software tools, and current technologies in multimedia systems and network systems are included in the curriculum.

- **Objectives of the Training and Graduation Project Modules.** The objectives of these modules are to allow students to gain practice in problem analysis, design, implementation, report writing, and presentation.

- **Elaboration on Content and Emphasis of Practical Components of Modules.** Most of the modules contain practical work that make students involved in using current software tools and computing technologies. Thus, the practical part of modules accounts for at least 25% of the total number of hours. Many laboratory assignments are given during the semester through which the students can practice what they have learned from the theoretical part of the module, or develop their skills in using most recent software tools and programming languages. For example, the practical work in "Programming Fundamentals" and "Object-Oriented Paradigm" modules emphasize on problem solving and structured and object-oriented programming via C++ language and Java language. However, the practical work in Operating System module is concerned with inter-process communication, while in Net-Centric computing it is concerned with client server applications and simulation of OSI protocols.

4. **Innovation of Curriculum.** The curriculum is constantly evolving to cope-up with new technologies and rapidly developing software. The first curriculum was designed in 1994 and updated in 1999, 2000, and 2001. This development is through regular internal monitoring and reviews, and to recent local developments in teaching and learning. For example, the Curriculum 2001/2002 is a clear specialisation in development of software and information systems that are supported by the object-oriented technology. Proceeding in this way provides a curriculum that matches the aims and objectives of the Department and the University. The Scientific Committee with the Syllabus setup committee of the Department usually recommend development and modification of curriculum.

XIII. Health and Safety in the University

The University has a Health and Safety Committee, which comprises representatives of all services within the University. It is the responsibility of this committee to investigate complaints and potential hazards, to examine the cause of all accidents and to carry out periodic inspections of all areas of the Department. At registration, you will be required to assent to the departmental code of behavior, which relates to health and safety.

1. **Buildings**
   The Department comprises two kinds of buildings: the Rooms Building and the IT Laboratories. The buildings are generally open between 08.00 and 19.30 (Sunday – Thursday). In accordance with University policy, smoking is prohibited throughout all buildings.

2. **Emergency Evacuation**
   It is the responsibility of every individual to familiarize themselves with the Department's buildings and be aware of the fire exits.
   - After evacuation of any building, please assemble well away from the building, and do not block any exits.
   - Do not return to any building until authorized to do so.

3. **Fire Action**
Fire Action notices are located at, or adjacent to, fire alarm actuation points, and all staff and students should make them acquainted with this routine.

4. Operating the Fire Alarm
The manual fire alarm system can be activated by breaking the glass in the red contact boxes sited at strategic points throughout the premises.

5. Use of Fire Appliances
Fire appliances are sited at strategic points throughout the Department to deal with fires. Fires should only be tackled provided there is no personal danger and after the alarm has been set off.

6. Action when the Alarm Rings
On hearing the intermittent alarm, you should prepare yourself to leave the building.
On hearing the continuous alarm, you should evacuate the building immediately by the nearest exit.

7. Personal Difficulties
Please inform the Department's counselors or your tutor of any difficulties with which the Department can be of assistance.

Philadelphia University       Faculty of Information Technology       MIS Handbook       2008 – 2009       20
Appendix B

Outlines of Module Descriptions

2009 – 2010
I- The University Requirements and Faculty Requirements
In the University requirements, only the computer-based modules are considered here.

(A) University Requirements

750111, Computer skills
3 hours per week, 3 credit hours, prerequisite: none

Aims: Introduction to computer systems and practical use of software packages.

Teaching Method: 30 hours Lectures and Laboratory (2 per week) + 15 hours Example sessions (1 per week)

Textbook:

Synopsis: Introduction to computer systems and practical use of software packages. Introduction, MS-DOS, MS- Windows, WinWord, Excel, PowerPoint, Internet.

Assessment: Two 1-hour midterm exams (15% each); Assignments (20%); 2-hours Final Exam (50%)

(B) Faculty Requirements

750112, Programming Fundamentals
3 hours per week, 3 credit hours, prerequisite: none

Teaching Method: 30 hours Lectures (2 per week) + 15 hours Tutorials (1 per week) + 15 hours Laboratory (1 per week)

Aims: This module aims to introduce the principles of Top Down problem solving strategy (divide and conquer), algorithm design, and imperative programming mainly at an abstract level. Topics include data definition structures, control structures, and primitive data structures. C++ programming language (in visual environment) is adopted as a vehicle language for implementations.

Textbooks:
2- Deitel & Deitel, C++ How to Program, Prentice-Hall, 2000

Synopsis: Problem Solving, Problem Solving Methodology: Analysis, Design (Algorithm), Coding (program), Testing, Maintenance, Top Down Algorithm design (Sub algorithm : function), Data Definition Structures: Types, constants, variables, Expressions: Arithmetic, Logical, Control Structures: I/O, Assignment, Sequence, Selection (simple, alternated, and multiple), Repetition (While, do while, for), Parameters definition and passing (function depth look), Record (non uniform set), Array of 1 and 2 dimensions (uniform set), Strings (use of main operations: Concatenate, Left_N_char, Right_N_Char, Include, Compare, …), File (use of main operations of a sequential file: open, reset, rewrite, read, write, eof), VC++ environment: Editor, compiler, linker, Run, and debugger, Programming with C++: Translating Algorithm structures into C++ structures

Assessment: Two 1-hour midterm exams (15% each); Assignments (20%); 2-hours Final Exam (50%).
761272, Multimedia Systems (course number is wong)

3 hours per week, 3 credit hours, prerequisite:

Teaching Method: 37 hours Lectures (2-3 hours per week) + 8 hours Tutorials (1 per 2 weeks)

Aims: This module is an introduction to the major topics related to multimedia (desktop publishing, hypermedia, presentation media, graphics, animation, sound, video, and integrated authoring techniques), multimedia devices and development tools. It emphasizes hands-on experience for students to familiarize them with the range of tools used in creating computer-based multimedia.

Textbooks:

Synopsis: Introduction to Multimedia: Basic concepts, Applications (video on demand, Videoconferencing, virtual learning, entertainment, games, simulations, virtual reality…), Multimedia Hardware, Multimedia Software Tools (Overview on current available tools), Desktop Publishing, Graphics, Pictures: graphic modes and formats, still pictures and format (JPEG…), User Interface Design and Graphics: Graphic Elements and user interface considerations (Backgrounds, buttons, presentation elements), Production Planning and Design: (Research, content flow, Content acquisition, Multimedia team management using project management software, Budgeting considerations, Element and resource lists), Audio and Sound, Analogue Video (1), Digital video (2), Animation, Authoring, Hypermedia Authoring: Authoring: Web Based Multimedia, Multimedia Compression: Overview on techniques and standards.

Assessment: Two 1-hour midterm exams (15% each); Project work (10%); Assignments (10%); 2-hours Final Exam (50%).

731270, Introduction to Web Programming

3 hours per week, 3 credit hours, prerequisite: 750112

Teaching Method: 18 hours Lectures (1-2 hours per week) + 7 hours Tutorials (1 per 2 week2) + 20 hours Laboratory (1-2 hours per week)

Aims: This module aims to give students an introduction and general concepts of the Internet and Intranet technology, the World Wide Web, TCP/IP and Web design languages (HTML, CSS, JavaScript, and ASP). It also involves the necessary background that student needs to develop different tasks of programming aspects concerning the foregoing objectives. Sufficient study levels are supposed to be studied and learned by the students within the course for the sake of applying the different fields of education, learning, economical, E-Business and other approaches.

Textbooks:

**Assessment:** Two 1-hour midterm exams (15% each); Course work (15%); Tutorial contribution (5%); 2-hours Final Exam (50%).

---

**721240, Computing Ethics**

3 hours per week, 3 credit hours, prerequisite: **0731150**

**Teaching Method:** 30 hours Lectures (2 hours per week) + 10 hours Seminars (average 1 per week) + 3-5 hours presentations at the end of the semester (depending on the number of students in the class) where students present their work in the essays.

**Aims:** This module aims to give students an informed awareness of the principal issues of professional ethics and responsibility in the design, implementation and use of computer and information systems. In addition, the module aims to help in recognition of ethical problems when they occur, and to enable students to deal effectively with ethical and professional issues now and in their future careers. The module does not require a laboratory, but one group and one individual essay are required. Students are expected to spend 10 - 20 hours preparing for these essays at outside lecturer times. Students are asked at the end of the semester to present their essays.

**Textbooks:**

**Synopsis:** Introduction to the module, Problems of ethical decision-making, Professional Societies and their codes of conduct and practice, Professionals and Professional Behavior, Discussion of Case Studies: Describing Steps to Resolve the Current Situation, Preparing Policies and Strategies to Prevent Recurrence. Introduction to the Crawling Eye case study, Formal laws do not make for ethics, Graduate careers in the 21st century, Building the foundations to future career success, Concurrent engineering, group working and distributed enterprises, The law and contracts, Safety critical systems and legal liability, Introduction to the Killer Robot case study, A business view of contracts, IPR and copyright, IPR and patents, Computer misuse and the law, Data Protection, the Act and its implications.

**Assessment:** Two (1 hour) midterm exams (15% each); Assessment by individual essay (10%); Assessment by group essay (10%); 2-hours Final Exam (50%).

---

**731150, Introduction to Information Systems and Technology**

3 hours per week, 3 credit hours, prerequisite: **750112**

**Teaching Method:** 38 hours Lectures (2-3 hours per week) + 7 hours Tutorials (1 per 2 weeks)

**Aims:** This module aims to provide students with some concepts of information systems and some applications in business and management systems.

**Textbooks:**

**Synopsis:** Information theory, dynamic systems, concepts and applications in business organizations, information theory and applications, information systems, information systems in management, management information systems, information technology and computer information systems.
**Assessment:** Two midterm exams (15% each); Assignments (15%); Tutorial contribution (5%); 2-hours Final Exam (50%).

---

**721120, Object oriented Paradigms**

3 hours per week, 3 credit hours, prerequisite: 750112

**Teaching Method:** 20 hours lectures (1-2 hours per week) + 18 hours laboratory (1-2 hours per week) + 7 hours tutorials (1 per week).

**Text Book:**

C++ How to Program, Deitel and Deitel. Last Edition

**Aims:** introduction to object-oriented concepts and their programming in an object-oriented programming language.

**Synopsis:** Object-oriented programming focuses on the organization of software as a collection of discrete objects that incorporate both data structures and the operations performed on those structures. This course teaches the basics of object-oriented programming as it applies to business, including class, inheritance, and encapsulation, through the use of a language such as C++ or Java.

**Assessment:** Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

---

**II- The Departments' Major and Supplementary Requirements**

**(a) Supplementary Requirements**

**210105, General Mathematics for Administrative & Financial Sciences**

3 hours per week, 3 credit hours, prerequisite: none

**Teaching Method:** 30 hours Lectures (2 per week) + 15 hours Tutorials (1 per week)

**Aims:** This module aims to provide students with some background in different topics in mathematics such as derivatives, applications of derivatives, integrals, applications of integrals, transcendental functions and inverses of functions.

**Textbooks:**

2- Howard Anton, Calculus, Wiley, 2002

**Synopsis:** General Introduction: (Inequalities, functions); Limits and continuity; differentiation: (rate of change, chain rule, implicit differentiation); the mean value theorem:(maxima and minima, applications, concavity, curve sketching); Integration: (the fundamental theorem of calculus, change of variables, applications (area, motion, solids of revolution); the transcendental functions: (differentiation and integration).

**Assessment:** Two 1-hour midterm exams (15% each); Assignments (10%); Tutorial Contribution (10%); 2-hours Final Exam (50%)

---
210231, Introduction to Probability and Statistics

3 hours per week, 3 credit hours, prerequisite: none

Teaching Method: 30 hours Lectures (2 per week) + 15 hours Tutorials (1 per week)

Aims: This module aims to help students grasp basic statistical techniques and concepts, and to present real-life opportunities for applying them.

Textbooks:

Synopsis: Descriptive statistics and probability distribution; Sampling distribution Estimation for the mean, variance and proportions; Testing for the mean, variance and proportions; Regression and correlation; One-way analysis of variance.

Assessment: Two 1-hour midterm exams (15% each); Assignments/Quizzes (10%); Tutorial Contribution (10%); 2-hours Final Exam (50%).

330101, Introduction to Management

3 hours per week, 3 credit hours, prerequisite: none

Teaching Method: 30 hours lectures (2 hours per week) + 15 hours tutorials (1 per week).

Aims: Introduction to management focused around the achievement of organizational goals, and covering the major topics of strategy, systems, structure and resources, particularly peoples and money.

Synopsis: Introduction: definition and the need for management, The scientific method in studying management, The importance of management, Evaluation of management theory and management schools Planning and management decision-making Organizational charts and the organizational structure, The importance of directing, Leadership forms and theories ,Motivation ,The communication process Control forms, methods ,and fields of application ,Management evolution and characteristics of poor management . Computer tools and applications are used to support the subjects.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

732481, Commercial Law for Informatics

3 hours per week, 3 credit hours, prerequisite: 732371

Teaching Method: 30 hours lectures (2 hours per week) + 8 hours Tutorials (1 per 2 weeks) + 7 hours seminars (1 per 2 weeks).

Textbook:

Aims: To give the student the main concepts of commercial law in business and management.

Synopsis: Definition and origin of commercial law, commercial acts, store, commercial registry, commercial pledge, and agency commission (factor and brokers).

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).
311101, Principle of Accounting I/English

3 hours per week, 3 credit hours, prerequisite: 130101

Teaching Method: 30 hours lectures (2 hours per week) + 8 hours Tutorials (1 per 2 weeks) + 7 hours seminars (1 per 2 weeks).

Text Book:

Aims: Introduction to Managerial Accounting.

Synopsis: This course covers the following topics:· Introduction to Managerial Accounting.· Basic Cost terms and Concepts.· Cost Behaviour and Profit Margin.· Relationship among Cost-Volume-profit.· Relevant Information and Decision Making.· Cost Analysis and pricing.· Budgets: Master Budget; Sales Budget; Production Budget; Raw Materials Budget; Labour Budget; Overhead Budget; Cost of Goods Sold Budget; Sales Expenses Budget; Administrative Expenses Budget; Capital Expenditures Budget; Cash Budget; Performa Income Statement; Performa Balance sheet; Performa Cash flow Statements; Participate Budgets; Kaizen Budget.

Use CASE tools and other software to support the course materials.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

(b) Department Compulsory Requirements

731212, Introduction to Data structures and Algorithms

3 hours per week, 3 credit hours, prerequisite 721120

Teaching Method: 20 hours lectures (1 - 2 hours per week) + 18 hours Tutorials (1-2 hours per week) + 7 hours laboratory (1-2 hours per 2 weeks).

Text Book:

C++ An Introduction to Data Structures, Nyhoff, Latest Edition

Aims: This module aims to use truly object-oriented perspective to concentrate on teaching data structures rather than an object-oriented language features. Each data structure is introduced with a corresponding collection classes. Excellent case studies are also included. Any object-oriented language may be used.

Synopsis: Introduces students to the basics of data structures (stacks, queues, linked list, …). Introduces algorithmic analysis, string processing, recursion, and file processing techniques. Introduction to Algorithms.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

731421, Operations Research

3 hours per week, 3 credit hours, prerequisite 210105+210231
Teaching Method: 20 hours lectures (1 - 2 hours per week) + 15 hours laboratory (1 per week) + 10 hours tutorials (1 per week).

Text book: 

Aims: To introduce the concepts of operation researches in different business and management applications. Introduction to quantitative analysis: its importance and uses, Introduction to probability distributions, Decision theory, The utility theory and decision - making Linear programming methods: Case studies and CASE tools are used to support the subjects.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

760261, Database Fundamentals
3 hours per week, 3 credit hours, prerequisite: 731212

Teaching Method: 30 hours lectures (2 hours per week) + 7 hours Tutorials (1 per 2 weeks) + 8 hours laboratory (1 per 2 weeks).

Text book: 

Aims: This module aims to present the relational model and a corresponding DBMS. The DDL and DML must be used on a concrete database.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

731251, Information Systems Management
3 hours per week, 3 credit hours, Prerequisite 731150

Teaching Method: 30 hours lectures (2 hours per week) + 10 hours seminars (1-2 hours per 2 week) + 5 hours tutorials (1 per 2 weeks).

Text book: 

Aims: This topic aims to introduce students to Information Systems strategies and to Information Systems management.

Synopsis: Information definition, information and communication principles, information and message semantics, fundamental elements of communication system, the mathematical semantics of information, information control, information case, information systems in organizations, operating systems, business information systems, secession support systems, database and database systems.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).
732322, E-Marketing

3 hours per week, 3 credit hours, prerequisite 731371

Teaching Method: 30 hours lectures (1 - 2 hours per week) + 15 hours Tutorials (1 per week).

Aims: To introduce the concepts of marketing.

Synopsis: Definition of marketing, The modern concept of marketing, Consumer behaviour, Behavioural factors affecting consumer demand, Consumer behaviour approaches, Buying decisions and buying steps of the ultimate consumer, Market study and fundamentals of market segmentation, Commodities study, Organizing distribution: direct and indirect distribution channels, Marketing functions, Managing marketing functions, Planning in marketing, Marketing strategy and the marketing mix (product differentiation, packaging and pricing) Marketing research. Computer tools and applications are used to support the subjects.

Case studies and CASE tools are used to support the subjects.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

731331, Database Applications

3 hours per week, 3 credit hours, prerequisite 0760261

Teaching Method: 30 hours lectures (2 hours per week) + 7 hours Tutorials (1 per 2 weeks) + 8 hours laboratory (1 per 2 weeks).

Aims: This module aims to present the DBMSs and their applications in business and management.

Synopsis: System implementation techniques, Introduction to implementation, Data storage, Representing data elements, Database recovery techniques, Database security and authorization, Advanced database applications, Enhanced data models for advanced applications, Temporal database, Deductive database, Database technology for decision support applications, Distributed database and client server architecture, Emerging database technologies and applications.

Case studies and CASE tools and DBMS are used to support the subjects.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

731332, Systems Analysis & Design

3 hours per week, 3 credit hours, Prerequisite 0760261

Teaching Method: 20 hours lectures (1-2 hours per week) + 15 hours Tutorials (1 per week) + 10 hours laboratory (1 per week).

Aims: This course aims to provide students with an object-oriented information system development process.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

761340, Fundamentals of Computer Networks

3 hours per week, 3 credit hours, second year, first semester, Prerequisite 731212

Teaching Method: 30 hours lectures (2 hours per week) + 10 hours laboratory (1-2 hours per 2 weeks) + 5 hours tutorials (1 per 2 weeks).

Text Book:

Aims: Introduce students into networks and protocols fundamentals particularly TCP/IP.

Synopsis: This course looks at the types of information used in the business environment and the implications in terms of communications along with the trend toward digital integration of historically stand alone analogue and digital technologies. It examines the process of converting voice, data, image, and video information into integrated electromagnetic signals for transmission via various media. Coverage includes communications techniques, transmission efficiency methods, wide area networks (WANs), local area networks (LANS), high-speed trends in networking, and communications architectures and subsequent internetworking issues.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

731442, Principles of Operating Systems

3 hours per week, 3 credit hours, Prerequisite 760340

Teaching Method: 20 hours lectures (1-2 hours per week) + 15 hours laboratory (1 per week) + 10 hours tutorials (1 per week).

Aims: To introduce the basics of different operating systems and their applications in management and business.

Text Book

Synopsis: Functions of operating systems, including process management and concurrency, memory management, scheduling, user and file management security. The course provides hands-on experience in specialized laboratory, with PC and workstation, including system setup and basic system administration functions.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

731351, Information Systems Modelling

3 hours per week, 3 credit hours, prerequisite: 731332

Teaching Method: 30 hours lectures (2 hours per week) + 8 hours Tutorials (1 per 2 weeks) + 7 hours seminars (1 per 2 weeks).

Text Book
2. Booch G. The unified Modeling Language 1999

Aims: Information Modelling in the Next Millennium is for researchers and practitioners, who seek to understand the latest trends and developments in information modelling. The state-of-the-art and state-of-the-practice of modelling methods and methodologies in information systems development provide insights into important new developments in the new millennium.
Synopsis: Approaches to information systems modelling and their use in information systems development and information management. Philosophical foundations of information modelling, a comparison of approaches to information modelling, evaluating the quality of information systems models, information modelling in practice - the information model design process, generic models and patterns, corporate data modelling, the data management role within organizations.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

732361, Information Systems Projects Management

3 hours per week, 3 credit hours, prerequisite 330101+731150
Teaching Method: 30 hours lectures (1 - 2 hours per week) + 15 hours Tutorials (1 per week).

Text book:
Project Management for Information Systems, Cadle. 2003

Aims: To introduce the different projects management Technologies.

Synopsis: The concept of project management, Stages of the life cycle of the project, Location of project management on the organization chart. Selection of the project manager, Planning for project implementation: project scheduling: CPM and PERT, Acceptance or rejection of the project, Budget and cost control of the project, Feasibility study of the project.

Case studies and CASE tools are used to support the subjects.
Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

731371, E-Commerce

3 hours per week, 3 credit hours, prerequisite: 0721120+731270.
Teaching Method: 30 hours lectures (2 hours per week) + 5 hours Tutorials (1 hour per 2 weeks) + 10 hours laboratory (1 per week).

Text book:
Aims: This module aims to introduce Electronic Commerce basis, tools and applications.

Synopsis: Introduction to e-commerce, sales and marketing, globalization, company profiles, architecture, commerce server, vendor solutions, payment systems, and security, auction technology, project deployment.

Assessment: Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

732373, Decision Support Systems

3 hours per week, 3 credit hours, Prerequisite 731332+732361
Teaching Method: 30 hours lectures (2 hours per week) + 10 hours seminars (1-2 hours per 2 week) + 5 hours tutorials (1 per 2 weeks).

Text Book:
**Aims:** This topic aims to introduce students to decision making strategies.

**Synopsis:** Decision support systems background, comparison between decision theory, operation research and artificial intelligence. Introduction to decision theory, decision and research operation and AI, Multi criteria decision, thinking and case-based decision making, decision making cases and causes, interactive decision support systems.

**Assessment:** Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

---------------------------------------------

**731398, Practical Training**

3 hours per week, 3 credit hours, prerequisite: Department Agreement (student can take this module on completing 75 credit hours at least).

**Aims:** The main aim of this module is that students will have practice in different industrial, commercial, administrative enterprises or companies. By this module, students may apply, in the real world, what they have learned during the first three years of their study in the University. The module also aims to teach students how to be self-confident when they face problems in their practical life.

**Duration:** At least 9 weeks (18 training hours per week at least). This may be distributed onto two semesters at most.

**Regulations for Training:** Students who register on practical training modules should not register on modules with total credit hours more than 15 hours per week including the training module itself. Students must, therefore, be full-time trainees for at least 2 days per week. Students should arrange their timetable for other modules in a way that enables them to enroll in the pre-specified enterprise or company at least two days per week during the semester period.

**Assessment:** A committee from the Department supervises the students along their training period, where one supervisor is assigned on one group of students. The student should submit a technical report to this committee in 2 weeks time after completing the training session. In addition, the trainer body presents a report to the committee. The grade "pass" is given to students who complete the training requirements successfully and discuss their reports with the supervision committee.

---------------------------------------------

**731431, Data Warehousing and Data Mining**

3 hours per week, 3 credit hours, prerequisite: 760261

**Teaching Method:** 30 hours lectures (2 hours per week) + 10 hours seminars (1-2 hours per 2 weeks) + 5 hours tutorials (1 per 2 weeks).

**Text Book:**

**Aims:** An introduction to the concepts of data warehousing and data mining.

**Synopsis:** An introduction to the concepts of data warehousing and data mining as it applies to the data warehouse system environment. Data mining models, methodologies, techniques, and common operational issues will be covered.

**Use CASE tools and other software to support course materials.**

**Assessment:** Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

---------------------------------------------
732451, Information Systems Security

3 hours per week, 3 credit hours, Prerequisite 731332

**Teaching Method:** 25 hours lectures (1 - 2 hours per week) + 5 hours Tutorials (1 per 2 weeks) + 15 hours laboratory (1 hour per week).

**Text book:**
Richard Smith, Internet Cryptography, Addison Wesley, 1997

**Aims:** This topic aims to provide students with information security concepts, techniques, tools, and practice.

**Synopsis:** Review of information security components, principles, problems. Types of threats, including hackers, viruses, natural disasters, fraud. Information security philosophies, methods, models, techniques and controls, including risk analysis, access matrices, passwords, smart cards, and auditing. Information security for different applications. Internet security. Ethical and legal issues. Computer crime. Information security management and policy. Internet security management and policy. Information security in the future.

**Assessment:** Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

732432, Object Oriented Database

3 hours per week, 3 credit hours prerequisite: 731431

**Teaching Method:** 25 hours lectures (1-2 hours per week) + 5 hours Tutorials (1 hour per 2 weeks) + 15 hours laboratory (1 per week).

**Text book:**

**Aims:** Provide students with advanced database concepts and techniques as complement to database technology course.

**Synopsis:** Transaction processing concepts, Concurrency control techniques, Database recovery techniques, Database security and authorization, Advanced database concepts and emerging applications, Enhanced data models for advanced applications, Temporal database, Deductive database, Database technology for decision support applications, Distributed database and client server architecture, Emerging database technologies and applications (multimedia, Web, …).

**Assessment:** Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

731463, Knowledge Management

3 hours per week, 3 credit hours, prerequisite 731332

**Teaching Method:** 20 hours lectures (1 - 2 hours per week) + 15 hours laboratory (1 per week) + 10 hours tutorials (1 per week).

**Text book:**
**Aims:** This topic aims to select an information systems or information management viewpoint to examine concepts of knowledge management (KM) from perspectives including artificial intelligence, document management, organizational and management theory.

**Synopsis:** Relationship of science, knowledge vs data and information; sources and forms of knowledge, Views and characteristics of KM; knowledge acquisition and modelling; information science in knowledge management context; science and systems thinking; artificial intelligence and KM, organizational modelling - soft systems, organizational memory and learning; documenting knowledge: documents in electronic environment, meta-data; classification, business analysis, intranets as knowledge management technology; knowledge management environments: intranet and workflow; information support for decision making. Explicit and implicit knowledge, and techniques for modelling knowledge in decision making processes.; workflow approaches to KM; developing knowledge systems: evaluation of the knowledge requirements of organizations; knowledge elicitation techniques; techniques for validation of knowledge; strategies for applying KM in organizations.

**Assessment:** Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

---

**731313, Advanced Java Programming**

3 hours per week, 3 credit hours, prerequisite 721120

**Teaching Method:** 20 hours lectures (1 - 2 hours per week) + 15 hours laboratory (1 per week) + 10 hours tutorials (1 per week).

**Text book:**
1. Douglas Bell, Java for Students, Prentice Hall, 2002
2. Cay Horstmann, Gary Cornell, Core Java 2 Volume 1-Fundamental, 2001

Aims: This The student will be able to use Java capabilities to solve real world problem and apply Java in problem solving. The student will have knowledge about advanced OOP, Applets, GUI, Graphics, Multimedia programming, DB connectivity and other topics. Different Java packages and software will be used during the course.

**Assessment:** Two 1-hour unit tests (15% each) + Assignments (20%) + 2-hours final exam (50%).

---

**731499, Graduation Project**

3 credit hours, prerequisite: 731398 + Department Agreement

**General Descriptions:**
The graduation project consists of a single project on which the student works over a period of 16 weeks that can be extended to 32 weeks (2 semesters). It is assumed that the student spends a nominal 192 hours (or 384 hours), the equivalent of 12 hours per week, working on this. There are three deliverables: demonstration, discussion, and a written report.

A student works under the supervision of a member of staff, the Supervisor. Most of the projects involve three students working together on the same project; apart from these, all students do different projects.

**Aims:** The aims for the project work done in the fourth year are:
1- To manage and execute a substantial project in a limited time.
2- To identify and learn whatever new skills are needed to complete the project.
3- To apply design and engineering skills in the accomplishment of a single task. In this context the skills mentioned may be in the general area of design and engineering in its broadest sense, or may be very specifically related to particular tools.

The projects list and notes for guidance in carrying out a project are available in the Graduation Project Committee.

**Assessment:** Supervisor mark: 35%; Project Examination Committee mark: 65% (demonstration 20%, Report 25%, discussion 20%).

All major modules include 25% practical work (Tutorials, Labs, Assignments).

* Registration for practical training module is implemented according to Faculty regulations.

All students must apply for the level exam in Arabic and English languages and Computer. The student who fails in any of these exams (mark is less than 50%) must successfully pass the corresponding preliminary module.
