Philadelphia University strengthens its links with European Universities through TEMPUS projects in order to establish a master program in Mechatronics

Philadelphia University participated in a third meeting with its TEMPUS project partners from Germany, United Kingdom, Poland, Egypt, and Jordan in order to lay foundations for a double-degree masters program in Mechatronics. This work is part of a three-year project entitled, “Development of Joint International Master Degree and Life Long Learning Framework in Mechatronics (JIM2L)” that was started in November 2011. There are a total of eight universities involved in the TEMPUS-JIM2L program.

The work meeting, that took place on 19-24 November 2012, was divided into two parts. The first was the steering committee meeting at the University of Applied Sciences (HTW) of Saarland in Saarbruecken, Germany. The second was the participation of a special session at the workshop on Research and Education in Mechatronics in Paris, France.

Through this program, PU is planning to launch a double-degree masters program in mechatronics engineering in October 2013. The program will allow students to study three semesters at PU and one semester at Bochum University of Applied Science in Germany.
