

Lab Work 10

Objectives: This lab work aims to test your understanding of "loop structures" and practice on programming some problems with different loop statements in the lab hours during this week.

Counter Control Loop (Using do-while Statement):

Q1: Write a C++ program that prompts the user to input N integer numbers and then outputs the average of them.

Q2: Write a program that reads 5 temperatures in Fahrenheit and convert them into Celsius. Your program should also produce the largest value of temperature after conversion.
